

Fork Positioner for Forklift

Fork Positioner for Forklift - A fork positioner is actually an apparatus made out of high quality materials meant to be able to endure the most demanding procedures and work environments. This piece of equipment enables the individual driving to be able to maneuver the blades hydraulically without leaving the seat. Side shifting units have the extra ability to be able to laterally position the entire load or the arms so as to facilitate more accurate carrying and position in a faster and more effective method.

The blade pocket is rather unique and enables the operator to safely swing the blades into position without any worry of damaging the positioning cylinders. This could allow the operator the alternative to execute independent or simultaneous fork movement, depending on the job requirement. For most forklifts with non-OEM carriages, complete carriages are necessary. Standard OEM carriages can be transformed into fork positioners on existing units.
